Data Flow Diagram

Created a Data Flow Diagram (DFD) to illustrate how information flows through EduGenie, an AI-powered educational platform. The diagram represents the movement of data between students, AI services, system processes, and the database, showing how user requests are processed, educational content is generated, and learning records are stored. Use the symbol legend below as a guide.

DFD Symbol Legend

Symbol	Name	Description
Oval / Rounded shape	External Entity	Represents an external user or AI service that interacts with EduGenie by sending learning requests or receiving AI-generated responses (e.g., Student, Google Gemini API).
Rectangle with numbered header	Process	Represents a system activity that processes user input and transforms it into meaningful educational content (e.g., Validate User Input, Generate AI Content, Save Learning History).
Rectangle (solid fill, no number)	Data Store	Represents a repository where EduGenie stores information for future use (e.g., User History, Learning Records, Database).
Labeled arrow	Data Flow	Represents the movement of information between users, system processes, AI services, and data stores, with labels indicating the type of data being transferred (e.g., User Query, AI Response, Learning History).

The diagram below illustrates the flow of data within the EduGenie system. It shows how information is exchanged between external entities, system processes, AI services, and data stores to process student requests, generate personalized educational content, and maintain learning history efficiently.

DATA FLOW DIAGRAM (DFD) – EDUGENIE
